DYNAMIC SKILL EXCHANGER

ABSTRACT

Learning new skills and sharing knowledge can be challenging without the right platform to connect people. Dynamic Skill Exchanger is a web-based application that makes it easier for individuals to teach what they know and learn what they want. Users can create profiles to list their skills and the subjects they're interested in learning. The platform provides personalized recommendations to match users with others who have similar goals. They can also post lesson requests and offers to find learning partners quickly and easily. To ensure a great experience, a feedback system lets users rate their teaching and learning sessions. The platform also uses a simple machine learning model to improve recommendations based on profiles and past interactions. A built-in chat feature helps users connect, discuss topics, and schedule sessions. Built with React, Node.js,Python Flask, and MongoDB, Dynamic Skill Exchanger creates a supportive space for collaborative learning. It's designed to help people grow, connect, and share knowledge in a straightforward and effective way
